What is file handling?

File handling in python allows us to create, read, write and delete files.

it is used to store data permanently.

We use built-in functions open()

Common modes:

"r" -> read

"w" -> write

"a" -> append

"b" -> binary mode

"t" -> text mode

"rb" -> read binary

"wt" -> write text

"wb" -> write binary

File paths:

1) Relation path

2) Absolute path
