1)''' create a function to print prime number from 1 to 20 using with input and with return'''

A) def primes(stv,spv):

   for i in range(stv,spv+1,1): #i=2,3,4,5,6,7,8,8,10

     for j in range(2,i,1):

       if(i%j==0):

         break

      else:

        return i

     primes(10,20)

o/p:

  11

2) create a function to find factorial of given number using with input and with return

A) def fact(num):

  f = 1

  for i in range(1,num+1,1):

    f = f*i

    return f

   fact(10)

o/p:

1
